## interferoMETER 5400-TH

-  Nanometer-accurate thickness measurement even with varying distances
-  Stable measurement from a long distance
-  Precise thickness measurement of up to 5 layers
-  Measuring rate up to 6 kHz for high speed measurements
-  Ethernet / EtherCAT / RS422 / PROFINET / EtherNet/IP

### Stable thickness measurement with varying distances

The IMS5400-TH white light interferometer opens up new perspectives in industrial thickness measurement. The interferometer is used for highly accurate thickness measurements from a relatively large distance. The large thickness measuring range allows the measurement of thin layers, flat glass and films. Since the white light interferometer works with an SLED in the near infrared range, it is possible to measure the thickness of optically non-dense objects such as anti-reflective coated glass.

### Reliable even with fluttering material

A decisive advantage is the distance-independent measurement, where a stable nanometer-accurate thickness value is achieved. This is how the target can move within the measuring range without influencing the accuracy.

### Multi-layer thickness measurement

The thickness of transparent coated objects or laminated glass can be reliably measured thanks to the multi-layer thickness measurement. The controller outputs the thickness values with the highest stability regardless of their position.

	Controller	IP40 (option / VAC)		-
Vacuum	Optional UHV (cable and sensor)		-	
Material	Sensor	Stainless steel		
	Controller	Aluminum housing, passive cooling		
Control and indicator elements	Multifunction button: two adjustable functions as well as reset to factory settings after 10 s; web interface for setup: selectable presets, freely selectable averaging, data reduction, setup management; 6 x color LEDs for intensity, range, SLED, pilot laser, status and power; pilot laser: switchable for sensor alignment (laser LED 635 nm, laser class 1, power < 0.2 mW)			

All data at constant ambient temperature (24 ±2 °C)

<sup>1)</sup> Measuring range with n=1.5; for air gap measurement between two glass plates (n~1) the measuring range is 0.05 ... 2.1 mm.

The measuring object must be within the working distance.

<sup>2)</sup> Measuring rate 0.5 kHz, moving averaging over 64 values, measured on an approx. 1 mm thick BK7 optical flat (2 sigma)

<sup>3)</sup> Maximum thickness deviation when measuring on an approx. 1 mm thick BK7 optical flat (n=1.5) when passing through the measuring range

<sup>4)</sup> With a working distance of 45 mm (TH-45) or 70 mm (TH-70)

<sup>5)</sup> Maximum sensor tilt angle that produces a usable signal on an approx. 0.6 mm thick BK7 optical flat in the mid of the measuring range.

The accuracy decreases when approaching the limit values.

<sup>6)</sup> Optional connection via interface module (see accessories)

### Adjustable mounting adapter

The adjustable JMA mounting adapter simplifies the alignment and fine adjustment of interferometric sensors. You can integrate the sensors with the adapter directly into the machine and then align them directly on site. This corrects, e.g. minor deviations caused by mounting and compensates for tilted measuring objects. With two-sided thickness measurements, the mounting adapter supports the fine alignment of the two measuring points.
